ABOUT M&C

About M&C

We are M&C. As a family company in the Netherlands with over 40 years of experience in burglary prevention and security. Our extensive product line of high-quality security products includes cylinders, door fittings and locks. The core business of M&C is safety cylinders, in which we are highly innovative. The products we design are protected by several patents, and distributed worldwide.

Maximum security

All M&C products meet the highest security standards. Rely on M&C for the ultimate protection against burglary. M&C continues where others stop!

At M&C, we use innovative technologies and high-quality materials to provide the most advanced security solutions.

Family Company

As a family company, M&C takes pride in maintaining a familial relationship with our customers and employees. We work closely with customers around the world to develop personalized security solutions that meet their unique needs and requirements.

This personalized approach requires attention, flexibility and open communication that can only be found in a family company. Therefore, we see our organization not just as a company, but as part of a larger family that includes our customers and partners.

Family Company.

M&C

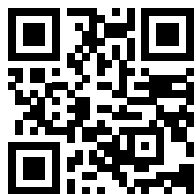

Our logo

M&C is characterized by the powerful and impressive image of a bull, which symbolizes strength, robustness and resistance.

Our products are no exception. They are designed to embody the same characteristics. Our logo gives the reassuring feeling that one can rely on the best security available.

Cylinder pinning

MODULAR SYSTEM

The great advantage of M&C cylinders is the modular system applicable to all our cylinder models. This makes our cylinders easily modifiable. As a result, you need less stock and the customer can be instantly serviced.

Our patented bridge with twist closure makes extending our cylinders quick and easy.

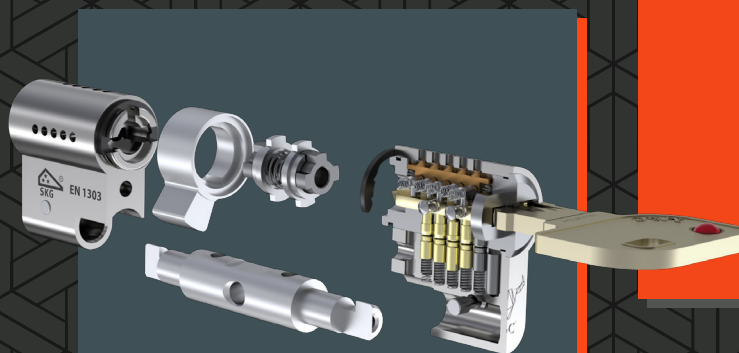

CHOOSE FOR M&C

M&C has a wide range of security products including cylinders, locks, and door fittings. Our cylinders are extremely strong and meet various safety requirements thanks to a robust stainless steel bridge and special U-clip that prevents against core pulling and drilling.

Our modular system makes modifying our cylinder very fast and easy. The big advantage is that all modular parts fit all our cylinder models. In addition, larger numbers of keyed-alike sets are available directly from stock.

All M&C cylinders are standard two-sided operable (panic function), and come standard with a security card which means that keys and cylinders can only be ordered at our specialist dealers.

M&C cylinders are available in the stylish colors nickel, black, brass and gun metal. We offer various cylinder models, each with their own strengths.

MORE THAN SECURE

Certification

Discover our selection of security cylinders. M&C cylinders are heavily secured, meeting the highest security requirements. All of our models (with the exception of the Matrix2) are SKG3 approved. In addition, all models are standard two-way operable.

Security card

M&C cylinders are supplied with a security certificate as standard. Additional keys and cylinders can only be ordered with the M&C Security Card.

Gun metal

VERSATILE

Variation

M&C cylinders are versatile and available in a variety of styles. We offer our cylinders and diverse selection of (push) knobs in nickel, brass, black and gun metal. M&C cylinders are available in various types such as: Euro profile cylinders, half (knob) cylinders, Swiss cylinders, rim cylinders, fichet cylinders, postlocks, padlocks and many more.

Push button

The M&C push button brings greater accessibility within the home, with a sturdy but easy to use system for quick locking and unlocking.

Master key systems

Our Matrix, Cobra and Condor cylinders are perfect for master key systems due to their large amount of possible combinations.

Suitable for smartlocks

All M&C cylinders are standard two-sided operable, making them ideally suited for most smartlocks.

MASTER KEY SYSTEM

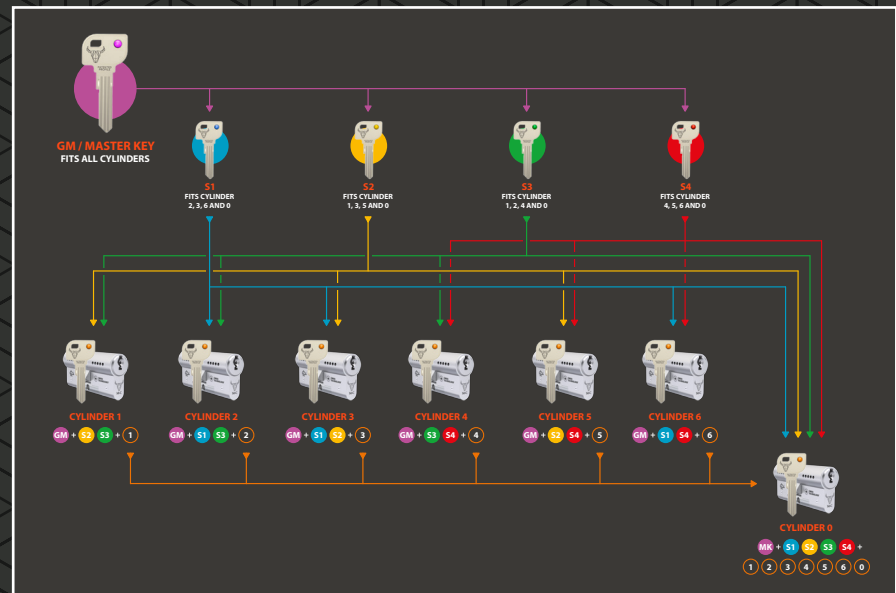

HOW DOES IT WORK?

A selection of M&C Cylinders* are capable of being used for a Master Key System. The system works as such: a single General Master Key that opens all cylinders will be given to the primary user. One level below this are the sub-master keys, which open only a select number of the locks within the system. Finally, there are basic keys that are meant to unlock only one cylinder.

The Master Key System can be used in apartment complexes, office buildings and industrial areas, where a single key opens all doors and allowing the option to grant limited access to others by giving them keys that rank lower within the system.

Several M&C Cylinders are available to make a Master Key System. Large scale security has never been this manageable and stylish.

Cylinder pinning

You can fill M&C cylinders with pins yourself when you would like to add a single cylinder to an existing set. On the M&C webshop you can request the pins with the code on the security card. We supply complete sets for cylinder pinning, including all supplies. We also offer trainings where we teach you how to do it yourself.

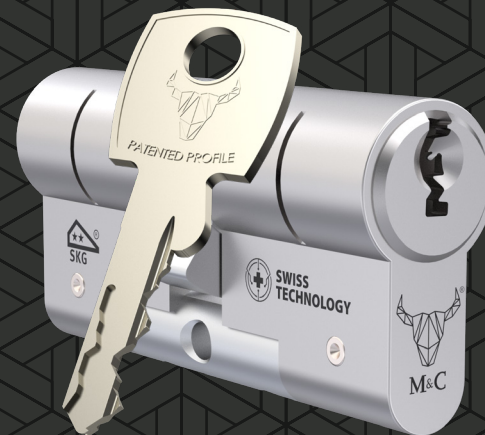

Modular parts cases

M&C cylinders are easy to extend by yourself. We supply complete sets of extension parts and tools in convenient cases that allow you to get started right away. The modular parts are suitable for all different models of M&C cylinders!

Matrix**

The M&C MATRIX SKG2** is the little brother of the M&C MATRIX SKG3*** yet is still very strong. The cylinder meets all SKG2** requirements and also has additional features. The hardened steel bridge, undercut, double-sided operation and security certificate make it safer than an ordinary SKG2** cylinder.

The advantages of the MATRIX SKG2**

Standard emergency function

Just like all other M&C cylinders, the M&C MATRIX SKG2** comes with an emergency function as standard: the door can be opened using a second key. This offers extra convenience. If someone accidentally leaves the key on the inside, you can still open the cylinder. This additional functionality is free of charge.

High copy protection

The M&C MATRIX SKG2** comes standard with a security certificate. Keys and cylinders can be reordered only with this M&C Security Card. In addition the key has a special notch (undercut), which makes illegal copying of the key extremely difficult.

Traditional cut key & steel bridge

The cut key enables you to cater for your traditional customers who prefer a more 'old fashioned' type of key, and to offer customers who have less to spend a very secure cylinder with extra security! The M&C MATRIX SKG2** also features a steel bridge, which prevents the cylinder from breaking.

Suitable for master key systems

The M&C MATRIX SKG2** is suitable for small-scale master key systems.

Color+

The M&C COLOR+ is the most colorful product in our cylinder range. The key caps are available in 10 different colors. Despite the playful appearance of the keys, this is a serious cylinder with very strong features.

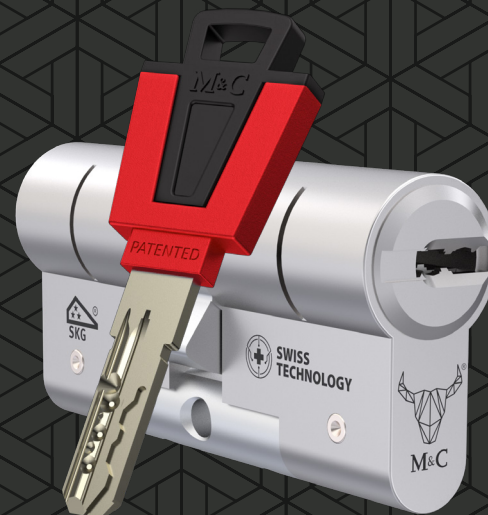

The advantages of the M&C COLOR+

Anti-picking and anti-drilling

The COLOR+ features special head pins at a 11-degree angle, making the cylinder very difficult to pick. The steel bridge and steel U-clip make it impossible to drill the core or pull out the cylinder.

Emergency function is standard

Like all other M&C cylinders, the COLOR+ is standard two-way operable. If someone accidentally leaves the key inside, you can still enter the house. At M&C, this feature is included as standard at no extra charge.

Define your style

The COLOR+ keys have easily interchangeable plastic caps, available in 10 different colors.

Modular

The modular M&C parts can be used for the M&C COLOR+. The modular parts save assembly time and reduce the storing cost and space. The advantage of this is that you can immediately modify the cylinder to your customers' needs.

Matrix***

The M&C MATRIX SKG3*** security cylinder offers security, convenience, and versatility. In addition, this cylinder is excellent for master key systems. The M&C MATRIX SKG3*** offers numerous possibilities.

The advantages of the M&C Matrix SKG3***

Very high copy protection

The special trap-pin in the cylinder works together with the undercut in the key. Due to this advanced technology, only an original key from M&C with undercut fits into the cylinder without activating the trap pin. Moreover, keys and cylinders are only duplicated upon presentation of the M&C Security Card.

Traditional cut key

The cut key enables you to cater for your traditional customers who prefer a more 'old fashioned' type of key. In addition, the undercut in the key provides extra security.

Versatile; ideal for master key systems

The M&C MATRIX SKG3*** cylinder is highly versatile and extremely suitable for small to very complex master key systems. The millions of different locking options give the M&C Matrix SKG3*** virtually infinite possibilities.

Anti-picking and anti-drilling

Advanced techniques such as the snake bar and side pins make the M&C MATRIX SKG3*** secure against lock-picking. The stainless Puma steel bridge and steel U-clip make it impossible to pull out the core or the cylinder.

Modular

The modular M&C parts can be used for the M&C MATRIX***. The modular parts save assembly time and reduce the storing cost and space. The advantage of this is that you can immediately modify the cylinder to your customers' needs.

Cobra

The COBRA has been designed to uphold the quality standards of all M&C cylinders, with the modular system, core pulling protection, stainless steel bridge, double trap pin failsafes and a hardened steel/anti-core pulling plate. But what makes the COBRA exceptional is that it allows locksmiths to set up their own Master Key System with the use of the MK software, which configures a unique cylinder set-up. The COBRA is available in nickel, brass and black.

The colored ball indicates the access level of the key within the Master Key System.

The advantages of the M&C COBRA

Master Key System

With a focus on the use for Master Key Systems, the COBRA was developed for setting up large scale projects, with the option to make systems with 10, 20, 30, 40 or 50 cylinders. Note: larger sets for Master Key Systems do NOT come with U-Clips.

Calculate yourself

Through a specially developed software system you can calculate your own system. The software calculates through 12 available U-clip profiles and, if necessary, master wavers.

U-Clips

Beside the larger sets we also provide sets comprised of 1, 2, 3 or 5 cylinders. These are equipped with U-clips by default and can be used right away. Naturally, you can make Master Key Systems by replacing the U-clips. All sets are compatible.

Mirror Key

For larger sets a specially made mirror key will be provided, which can be used to manually adjust the Master Key System. Entering this key in the back end of the cylinder core opens it, allowing you to place the U-clip that fits the required key with no pinning needed. This is a massive time saver when adjusting a Master Key System. For more information on this, please scan the QR code and watch the video.

Modular

The modular M&C parts can be used for the M&C COBRA. The modular parts save assembly time and reduce the storing cost and space. The advantage of this is that you can immediately modify the cylinder to your customers' needs.

Minos

The MINOS comes with durable metal keys and has special core pulling protection. In addition, the cylinder has a stainless PUMA steel bridge and hardened steel anti-drill/core pull plate for added security. The MINOS is available in the colors nickel, brass and black.

The advantages of the M&C MINOS

Indestructible stainless steel bridge

This cylinder has a special Puma stainless steel bridge. Stainless steel is a very strong material and also has a ductile property that makes breaking the bridge virtually impossible.

Extra smooth for improved ease of use

The rounded shapes where the key enters this cylinder help to guide the key even better.

Prevents drilling and core pulling

The hardened steel anti-drill plate (U clip) provides additional security against core pulling.

High degree of protection against unauthorized copying

The advanced technique, placing the main pins at an 11-degree angle, ensures unique key drill holes and makes the key very difficult to copy. Extra keys and cylinders will only be made if the M&C Security Card is shown.

Standard emergency function

Like all other M&C cylinders, the MINOS is standard two-way operable. If someone accidentally leaves the key inside, you can still enter the house. At M&C, this feature is included as standard at no extra charge.

Modular

The modular M&C parts can be used for the M&C MINOS. The modular parts save assembly time and reduce the storing cost and space. The advantage of this is that you can immediately modify the cylinder to your customers' needs.

Condor

The M&C CONDOR gets its name from the bird of prey with the largest wing area in the world. When this mighty bird takes your home or business premises under its wings, you have the best possible protection. Consequently, the M&C CONDOR security cylinder has 7.5 million different closures and is virtually unbreakable.

The advantages of the M&C CONDOR

Raised key profile

The robust key with the raised profile prevents illegal copying. The snake and snake holes offer extra security against lockpicking.

High anti-copying protection

The raised key profile and the Security Card provide a high degree of anti-copying protection. Extra keys and cylinders will only be made if the M&C Security Card is shown.

Anti-picking and anti-drilling

Advanced techniques such as the snake bar and sidepins make the M&C CONDOR secure against lockpicking. The stainless steel bridge and U-clip protect it from core-pulling.

Ideal for master key systems

The M&C CONDOR is highly suitable for master key systems, from small to highly complex applications.

Move

The M&C MOVE integrates the latest new technologies, making it one of the safest cylinders ever. The MOVE combines all the standard security features with a patented movable part in the key. This innovation gives the keys of the M&C MOVE the best anti-copying protection possible; the movable parts are even protected against copying by 3D printing.

The advantages of the M&C MOVE

Indestructible stainless steel bridge

The M&C MOVE features a Puma stainless steel bridge which combines extreme strength with flexibility, making it almost impossible to break.

Prevents drilling and lock-drilling

The steel anti-drilling plate (Trap Shark U-clip) with its stepped shape and unique shark teeth provides additional security against drilling.

Highest degree of protection

The movable part in the key, the side pins and the security card give the M&C Move the highest degree of anti-copying protection. Extra keys and cylinders will only be made if the M&C security card is shown.

Improved ease of use

The rounded shapes where the key enters this cylinder help to guide the key even better.

Modular

The modular M&C parts can be used for the M&C MOVE. The modular parts save assembly time and reduce the storing cost and space. The advantage of this is that you can immediately modify the cylinder to your customers' needs.

Product range

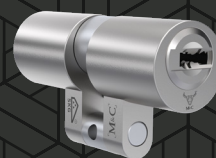

Padlocks

M&C Padlocks have a strong body, hardened steel shackle, and is extremely difficult to break open. Our padlocks can be combined with our entire cylinder range and can be made equal-locking and incorporated into master key systems.

Fichets

Fichets are the perfect choice for a more compact door lock, made with the familiar quality craftsmanship as seen in all other M&C products. Available in several sizes.

Condor Swiss 22

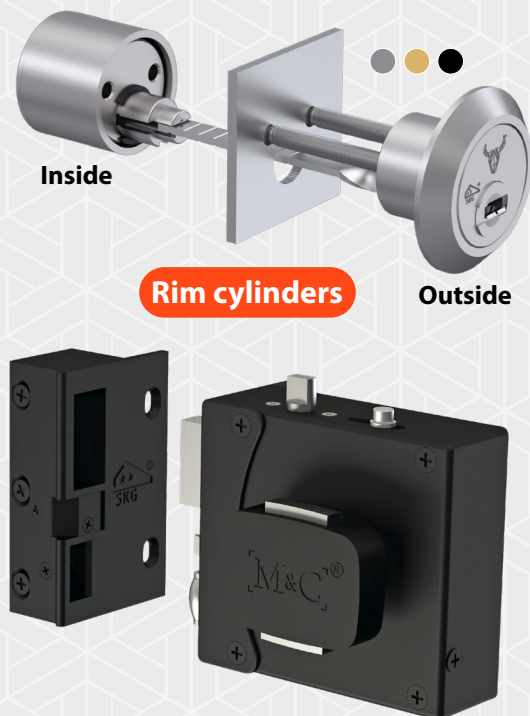

The CONDOR Swiss 22 is the familiar CONDOR model in a compact, Swiss style appearance. Like it's big brother, the CONDOR Swiss 22 is Modular, SKG*** and compatible with other CONDOR models.

Post/cam locks

M&C post locks are very secure, strong and durable locks. Our post locks are available with M&C cylinders. You can choose from the options: Minos, Cobra, Condor and Move.

Our entire product range can be combined with M&C cylinders and keys

Rim cylinders

Rimlock (left and right)

The M&C self-locking security rimlock can be combined with M&C rim cylinders. The outer part is available in nickel, brass and black. The roller latch and auxiliary latch bowl (2 directional) are adjustable, as is the backset. The rim lock is available for both left and right swinging doors. The inner and outer rim cylinders are also suitable for other brands of rim locks.

Mortise- and side locks

M&C security mortise locks are SKG** approved. The lock and locking plate are made of corrosion-resistant galvanized steel, making the lock very durable.

We offer several options to meet your specific needs and door sizes. Please inquire about the options.

60ml

13ml

Maintenance products

M&C cylinder spray is the best lubricant for our cylinders. This quality spray lubricates the cylinder and repels dirt and moisture, decreasing wear and tear and extending the lifespan. M&C cylinder spray is available in 13ml and 60ml sizes.

Door fittings

The M&C adjustable door fittings are the ideal choice for those looking for secure, durable and stylish fittings. Thanks to its innovative adjustable screw-in lugs, it can replace most common hardware without having to drill additional holes in the door.

The advantages of M&C adjustable door fittings

Adjustable

The screw-in lugs are adjustable to fit into the existing screw holes. This allows the adjustable door fittings to replace most common fittings without having to drill additional holes in the door. The hardware is suitable for door thicknesses of 38-58 mm and is supplied with two sets of screws and a spindle.

Versions

The hardware is available in two solid metal variants: handle/handle and knob/handle, in colors F9 (nickel) and black. In addition, there are options with and without core pull protection and a version with insect/dirt protection. All variants are available in PC sizes of 55 mm and 72 mm.

M&C JEWEL LINE

Outside of our guarantee of quality and security, M&C is also proud of our presentation style. With the M&C Jewel Line, that promise of sleek design goes another step further, offering a line of luxury keys and cylinder adjustments adorned with the highest quality materials.

Bringing a premium luxury appearance to the familiar level of quality in security from M&C.

For more details regarding this exclusive line, please contact M&C directly.

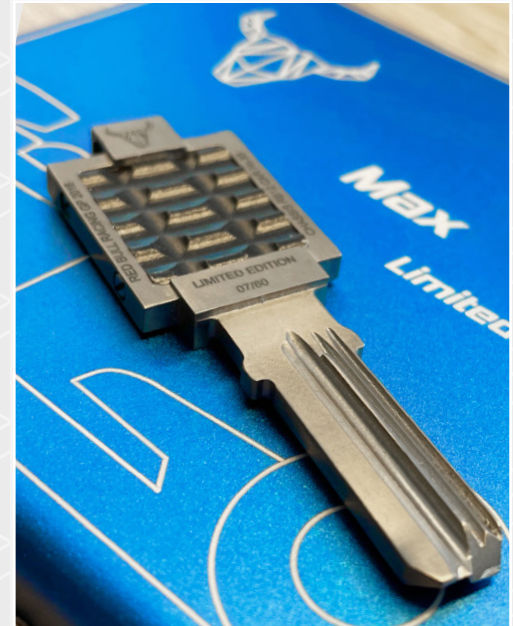

M&C SPORT LINE

For the greatest fans of sports and racing, M&C has developed the most unique line of keys in the world: the M&C Sport Line.

These keys are especially crafted and available in limited supply. The material used to craft these keys has been collected from vehicles used in races, driven by championship winning drivers.

With limited availability, these keys can both be used on M&C cylinders or displayed as unique collector's items.

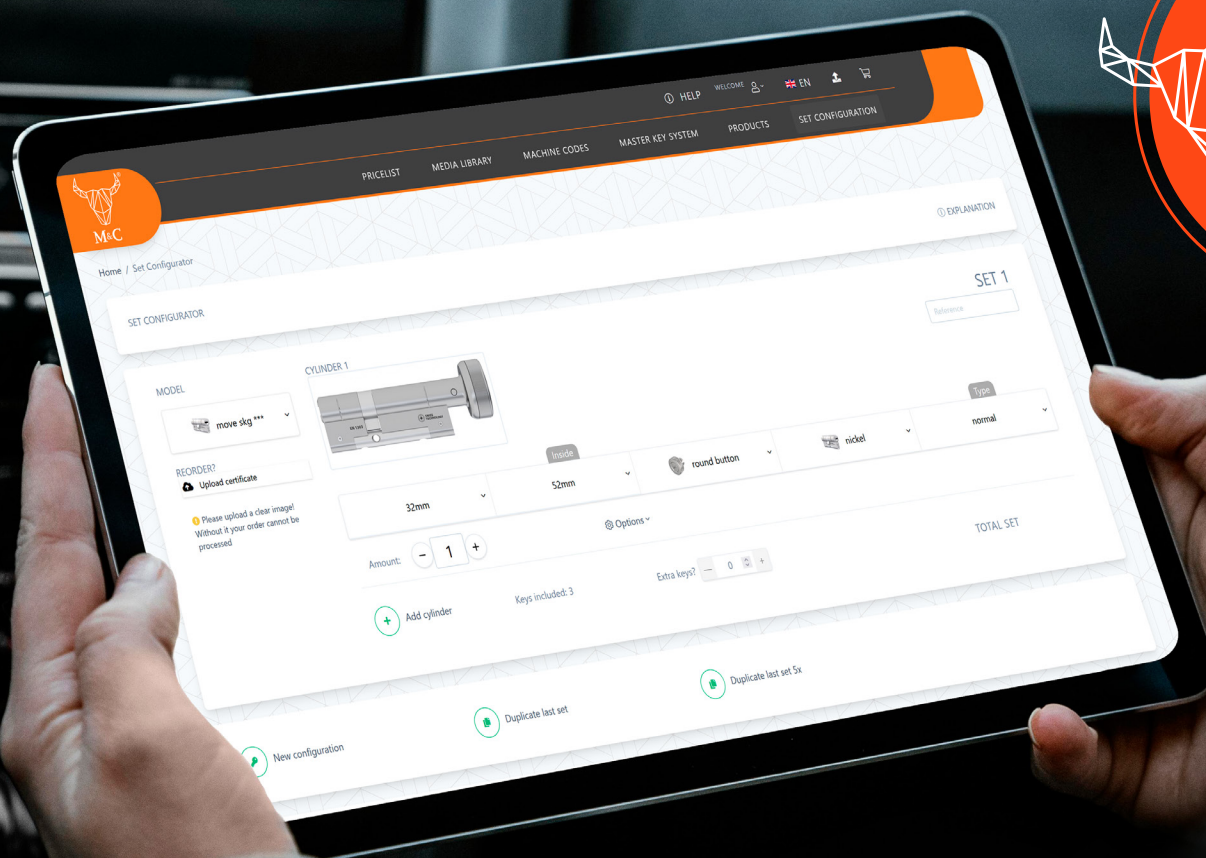

For more details regarding this exclusive line, please contact M&C directly.

PROMOTION

M&C supports you and your customer in making the right choice.

As an M&C dealer you have many advantages, including extensive support and access to a variety of promotional materials, both in print and digital form. Orders can be placed quickly and easily via the M&C webshop. The webshop also features a media library with a multitude of information in several languages, including product images, instructional videos, brochures and price catalogs.

Advantages:

- **Website:** www.m-c.eu
- **Webshop:** www.webshop-mc.nl
- **Instruction video's and trainings**
- **Promotional material, digital and print**
- **Store displays**
- **Media library**
- **Point of sale visible on M&C website**
- **Personal and quick customer service**

SUPPORT

We offer fast delivery that applies not only to standard orders, but also to custom and complex locking plans. Our focus is to deliver your order quickly and provide personalized service.

We achieve this through direct contact and maintaining short lines of communication within our organization, enabling us to address your needs with speed and effectiveness. M&C works in a customer-oriented and cooperative manner.

At M&C, we are committed to providing high-quality products as well as smooth, personal, and fast service, all at an attractive price. We stand out from the rest because of our speed, efficiency, innovation, and customer service.

CUSTOMER-ORIENTED AND PERSONAL

Family Company.
